DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nguyen et al. (USPN 6655854 B1) in view of Chiu (SPN 6686546 B2).

Nguyen teaches a method of wire bonding an optoelectronic sensor (col 1 lines 14-19) by forming a ball at a first end of a wire, connecting the ball to the die pad, extending the wire from the die to the circuit pad forming a stitch bond with a wire loop having low height and repeating the steps for multiple connections as would be conventional (col 4 lines 35-58). However, the optical sensor is not disclosed as a finger sensor.

Chiu teaches an optical device which is a finger sensor (col 1 lines 51-65) formed by wire bonding (col 9 lines 46-63).

It would have been obvious to one of ordinary skill in the art at the time of the invention that the configuration would be similar for a variety of electronic devices and optical sensors and that a finger sensor is a type of optoelectronic device.

Response to Arguments

3. Applicant's arguments with respect to claims 1 and 23 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

4. Claims 2-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art teaches the invention essentially as claimed but does not teach the instant loop height. See Okada.
